

## FLUID APPLICATIONS

Aircom USA, Inc declares that primary applications for Quick Line System (either polymer or aluminum fittings) are **COMPRESSED AIR, NITROGEN, VACUUM** or other **INERT GAS** piping applications.

Quick Line System can be used in limited applications for liquids such as water if the water is treated to prevent algae or bacteria growth and no corrosive materials are present in the water.

The range of acceptable pressure and temperature ratings do not change.

Freeze ups in all applications causing solid "ice" formations must be prevented and will lead to pipe and fitting failures.

A handwritten signature in black ink, appearing to read "Stefano Di Liberto".

Stefano Di Liberto
